+ ACCEDIAN

Unleashing the Power of Seamless Network Visibility and Performance Optimization.

A Joint Solution from Accedian and Garland Technology.

IT operations teams need traffic insights to track, visualize, and manage network and application performance in real-time. Accedian and Garland Technology have joined forces to deliver a game-changing value proposition that revolutionizes network management. By combining Accedian's cutting-edge performance monitoring and assurance solutions with Garland Technology's advanced network TAP and packet broker technologies, we empower organizations to achieve unprecedented visibility, control, and optimization of their network infrastructure.

Our integrated solution provides end-to-end monitoring and visibility across complex networks, ensuring reliable and high-performance connectivity for critical applications and services. By tapping into network traffic at strategic points using Garland Technology's TAPs, our joint offering captures and aggregates data, delivering it to Accedian's powerful monitoring and analytics platforms in real-time. This seamless solution enables IT teams to gain deep insights into network performance, troubleshoot issues proactively, and make data-driven decisions to enhance overall operational efficiency.

▌HOW IT WORKS

1. Garland Technology Network TAPs mirror the network traffic to provide 100% network visibility.

2. The Garland Technology Packet Broker can then aggregate, filter, and load balance the traffic at scale.

3. Packets are streamed directly to Accedian's Skylight sensors, delivering network QOS and end user experience visibility, as well as a root cause of network and application performance degradations.

Accedian's performance monitoring capabilities, combined with Garland Technology's intelligent packet brokers, create a robust ecosystem that delivers granular visibility into every aspect of the network. This enables organizations to detect anomalies, identify bottlenecks, and optimize network resources, ensuring superior end-user experiences and maximum business productivity.

▌SOLUTION BENEFITS

By leveraging the combined value of Accedian and Garland technologies, network administrators can benefit from simplified deployment and management, thanks to our seamless integration and centralized control. The solution is scalable and flexible, accommodating diverse network architectures and accommodating future growth and technological advancements. Together, Accedian and Garland Technology empower organizations to confidently embrace digital transformation initiatives, unlock the full potential of their networks, and deliver unparalleled performance, reliability, and user satisfaction.

Experience the power of unified network visibility and performance optimization with Accedian and Garland Technology—your trusted partners for next-generation network management.

About Accedian

Accedian is a leader in performance analytics, cybersecurity threat detection, and end user experience solutions for service providers and mid-to-large size enterprises. The Accedian Skylight platform offers granular end-to-end visibility within "the massive multi" – multi-layer, multi-cloud, and multi-vendor networks. Accedian's open and scalable platform removes roadblocks to innovation, enabling cloud-native analytics and empowering customers to launch new assured services based on 5G, SD-WAN and edge technologies. Power your future with secure network performance. To learn more, visit accedian.com.

About Garland Technology

Garland Technology is an industry leader of IT and OT network solutions for enterprise, critical infrastructures, and government agencies worldwide. Since 2011, Garland Technology has been engineering and manufacturing simple, reliable, and affordable Network TAPs and Network Packet Brokers in Richardson, Texas. For help identifying the right IT / OT network visibility solutions for projects large and small, or to learn more about the inventor of the first bypass technology, visit GarlandTechnology.com.
